

CRSF Shot Step by Step Setup for OpenTX

Step 1: Go to

<https://www.team-blacksheep.com/tbs-opentx-nightly.zip>

Download the TBS Nightly Build

Step 2: Go to

<https://downloads.open-tx.org/2.3/release/sdcard/>

Download the newest SD card Contents for OpenTX

Step 3: Go to

<http://downloads.open-tx.org/2.3/release/companion/windows/companion-windows-2.3.5.exe>

Download the newest OpenTX Companion

Step 4: Go to

<https://www.team-blacksheep.com/products/prod:agentx>

Download TBS Agent X

Step 5:

Launch OpenTX companion

On Taranis Qx7, X9D+ and Jumper T16

Hold the left and right trims toward the center and turn on the transmitter, this will push you into bootloader mode

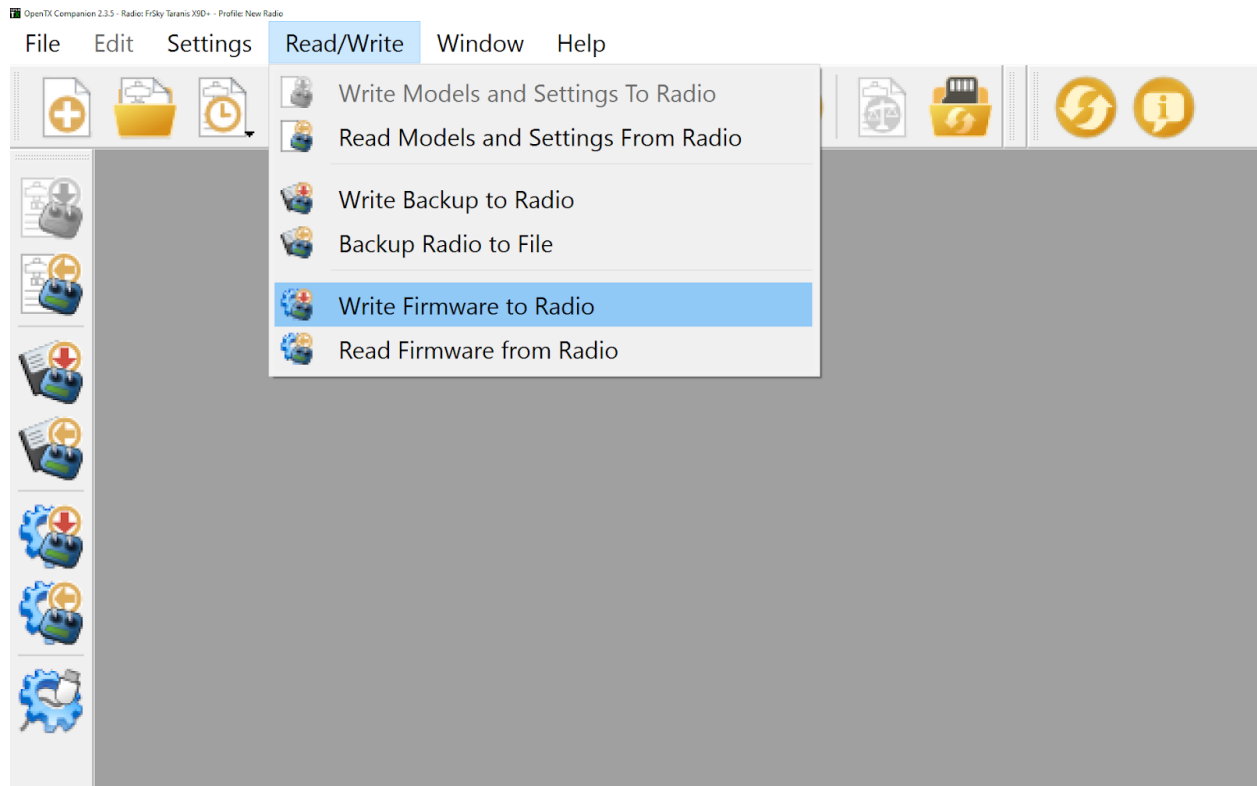

Some open TX radios may have another method of entering bootloader

Then Plug in Transmitter Via USB

Step 6:

in OpenTX companion, navigate to Read/Write and choose “Write Firmware to Radio”

Select Load

Flash Firmware

/Desktop/tbs-opentx-nightly/tbs_firm_x9d+_en_20200106.bin Load...

Version TBS (a9285a0b)

Variant 219

Date & Time 2020-01-06 09:38:23

☐ Use profile start screen

☒ Use firmware start screen

☐ Use library start screen

☐ Use another start screen

☒ Check Hardware compatibility

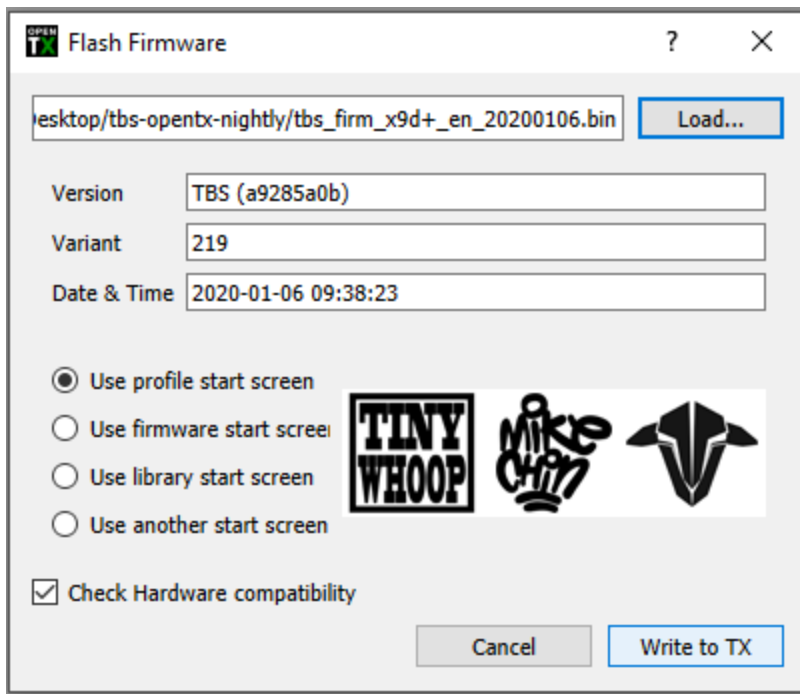

Cancel Write to TX

Then Select the Firmware for the Radio you are using

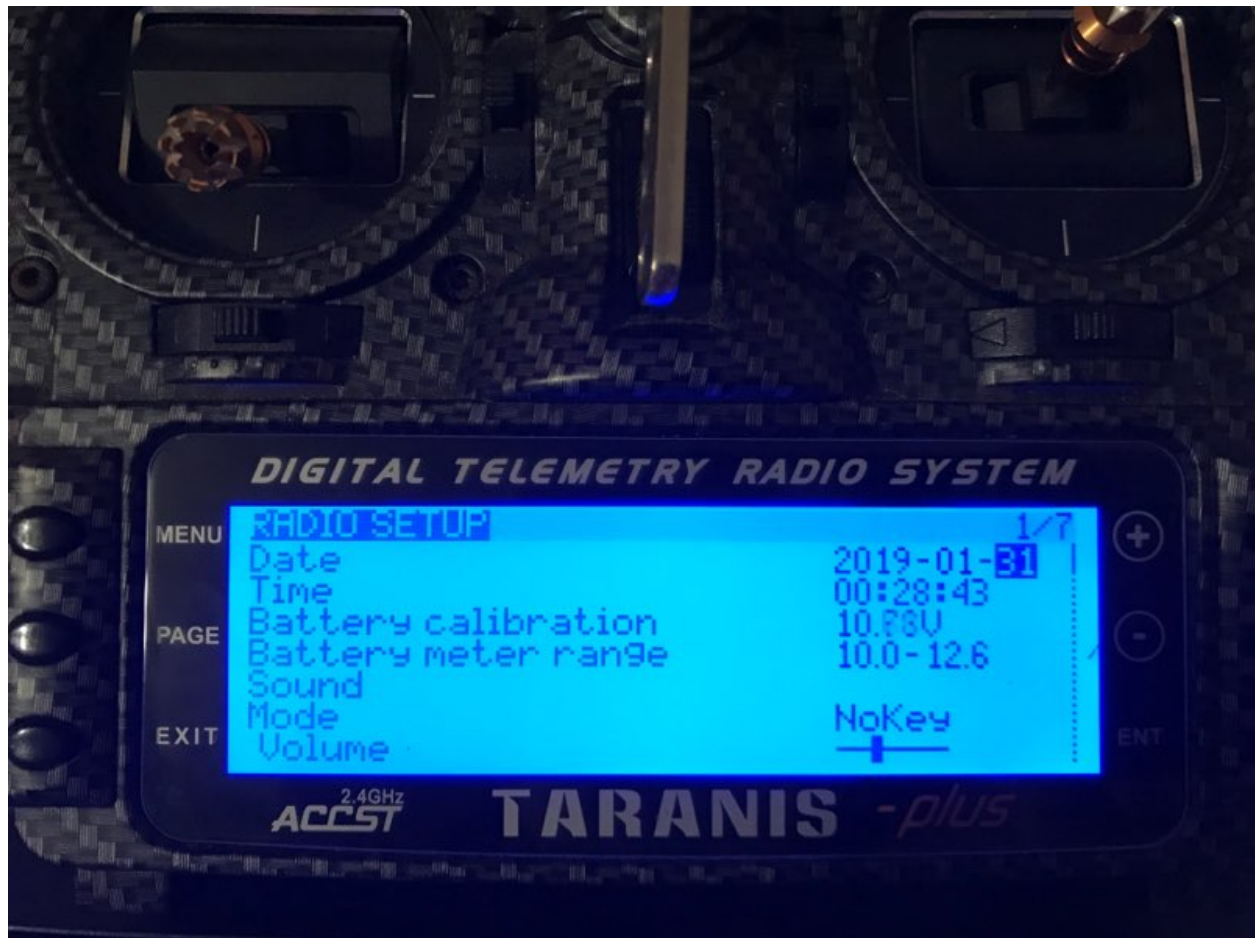

Name	Date modified	Type	Size

 tbs_firm_xlites_en_20200106.bin	1/5/2020 8:39 PM	BIN File	410 KB

Then select “write to Tx”

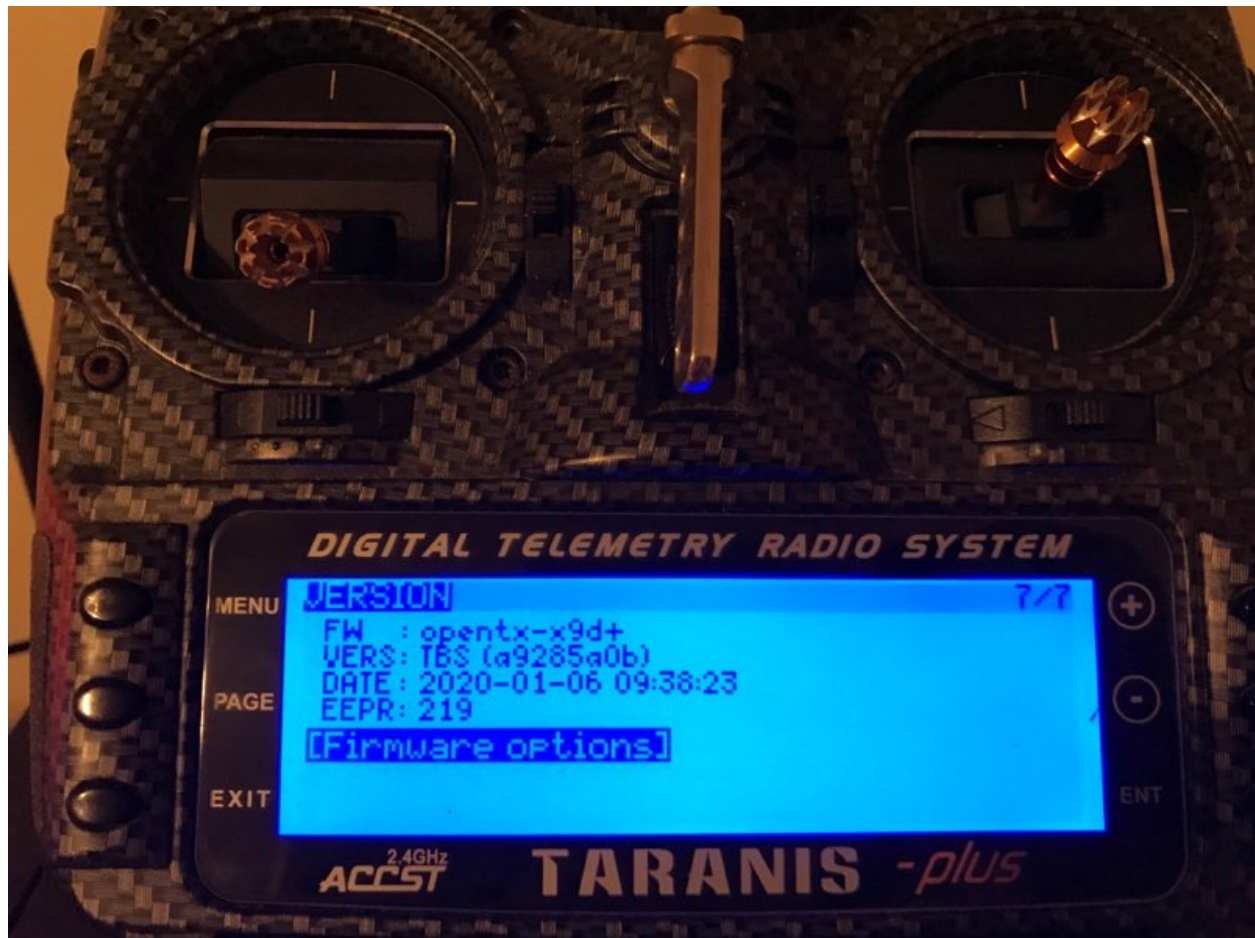

Step 7:

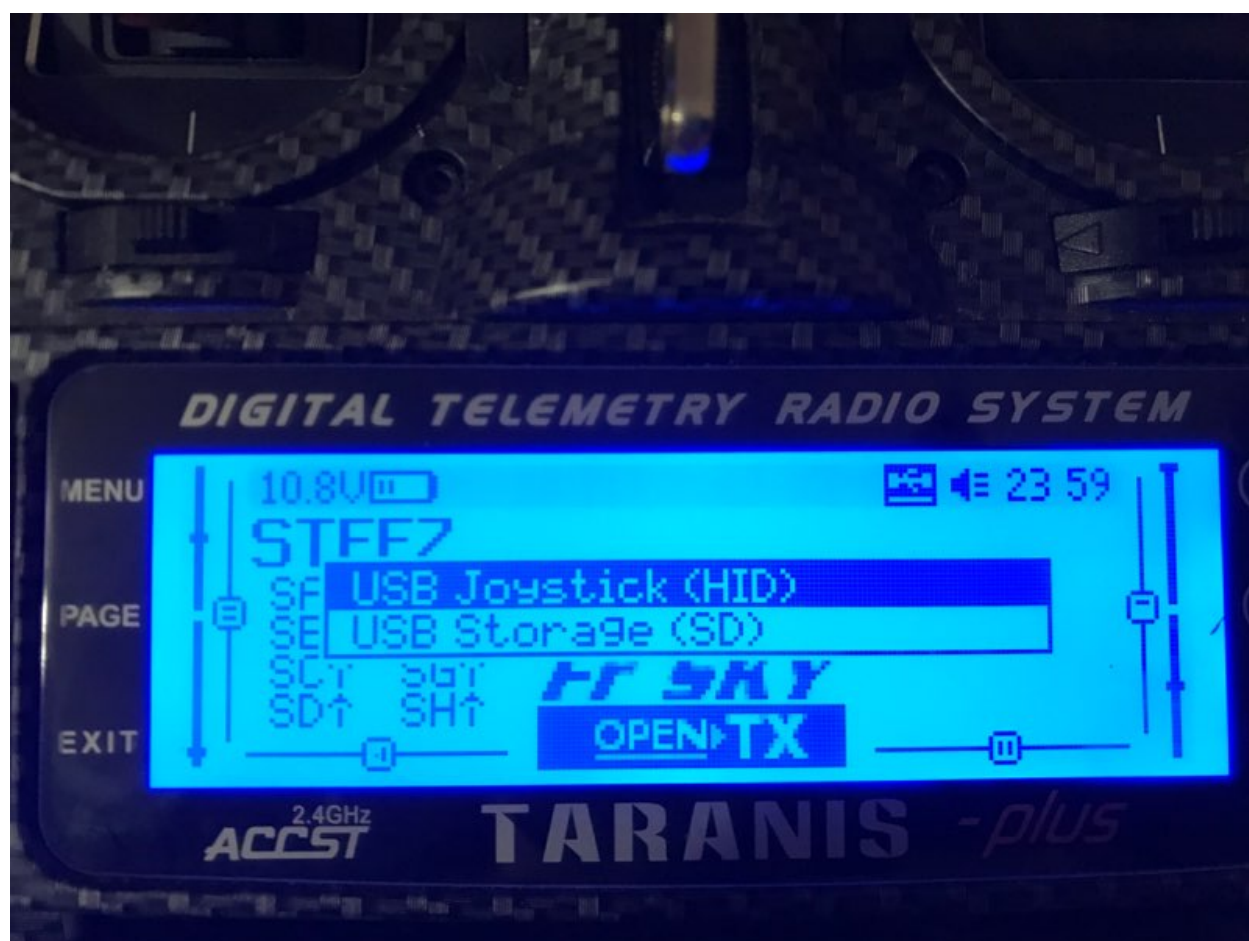

Unplug TX from Computer, confirm you are using the correct firmware by turning on the radio then holding the “Menu” button on the radio to enter “Radio Setup”

Then Hold the Page button down and ensure you are on the correct version

Next, plug in normally and select that on the transmitter to use as "USB Storage (SD)"

Step 8:

Copy the newly downloaded SD card files from their host file and paste them to the SD card on the Transmitter, this will take some time.

Name	Date modified	Type	Size

opentx.sdcard.version	12/8/2019 3:22 AM	VERSION File	1 KB

Step 9:

click the 3 dots on the top right corner of Agent X

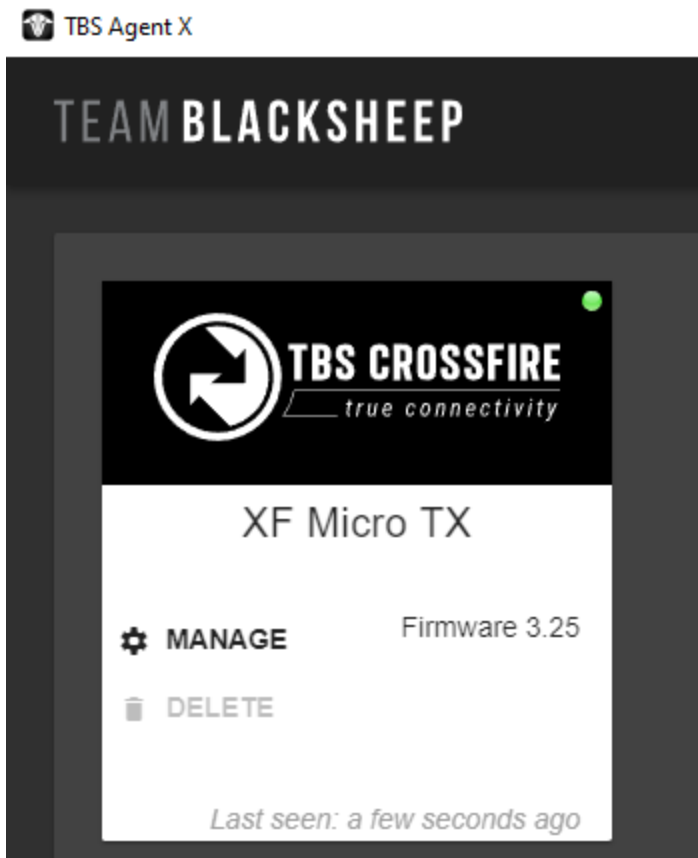

On the next page click the box to enable Beta Releases

Step 10:

Open Agent X and plug in your TBS Crossfire. You will have a Green Dot in the top right corner of the device that is plugged in. Select "manage"

Step 11:

Navigate to "Firmware"

Locate the update for 3.25 and click update on the right hand side under "action"

The screenshot shows the TBS Crossfire web interface for the XF Micro TX 3.24. At the top, there are buttons for 'CONFIGURE' and 'FIRMWARE'. The 'FIRMWARE' button is highlighted. Below the buttons, the 'FIRMWARE' section is displayed. It contains a table with columns: DATE, DESCRIPTION, VERSION, RELEASE NOTES, and ACTION. The table lists a firmware update for 3.25, dated 2020-01-15, with a 'Beta' tag. The 'ACTION' column has an 'UPDATE' button.

DATE	DESCRIPTION	VERSION	RELEASE NOTES	ACTION
2020-01-15	TBS Crossfire Micro Tx Beta	3.25	RELEASE NOTE	UPDATE

Step 12:

Turn on Radio, hit "Menu" then hit "Page" so you are on the Model Setup Tab

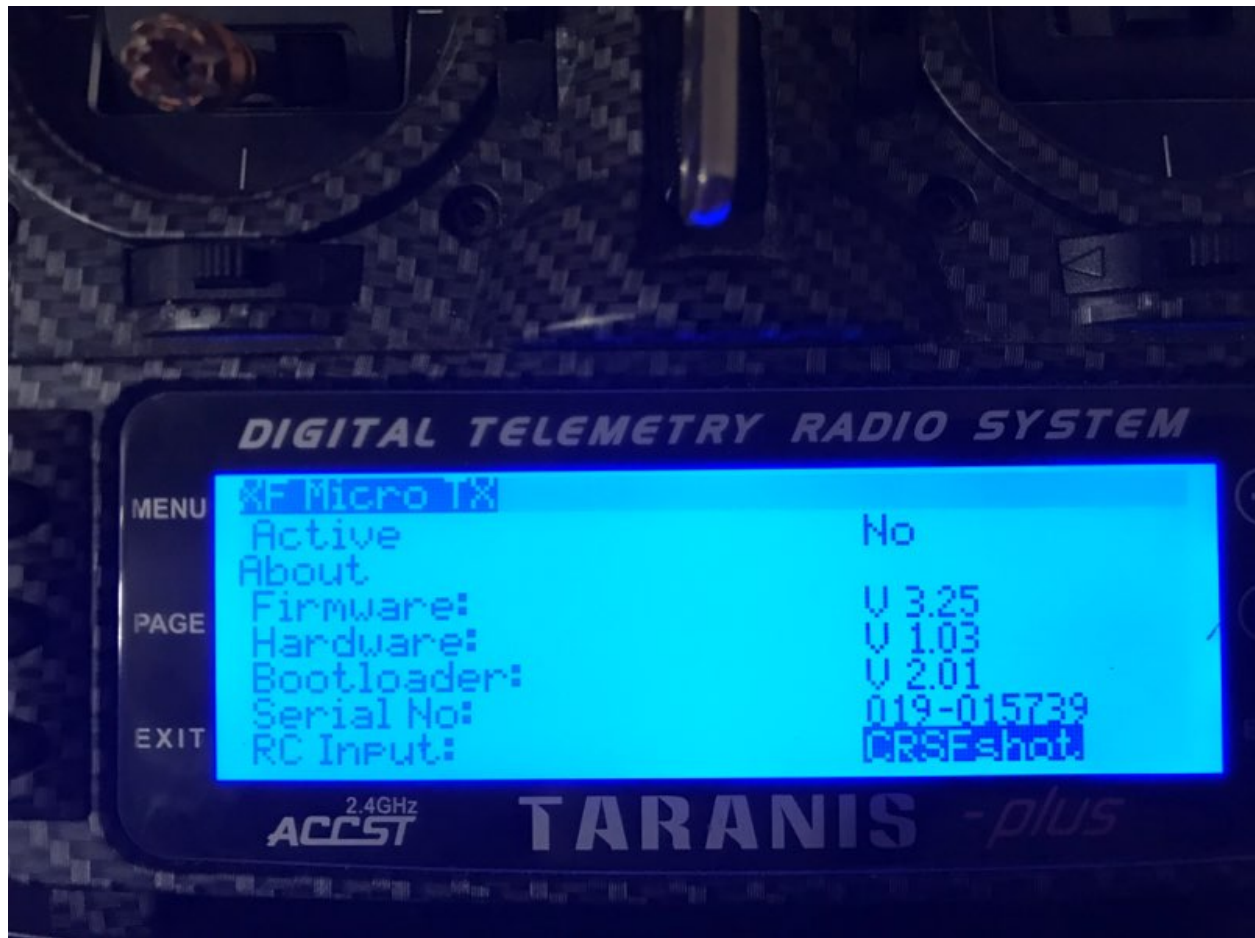

Navigate to RF settings at the bottom, make sure "Internal RF" mod is "OFF"

And change "External RF" to "CRSF"

You should now have CRSF shot enabled.

For the Crossfire Micro TX you can confirm this in the Crossfire lua by selecting "XF Micro TX" and navigating to the bottom of the menu

On the Fullside TX you will find this information on the Oled Screen here
